Jakarta, Indonesia

Detail-oriented IT Infrastructure Engineer with hands-on experience in managing virtualized environments and containerized applications. Proficient in Proxmox, Zabbix monitoring (15+ devices), and Docker deployment. Strong expertise in Linux server administration, network troubleshooting, and a passion for operational efficiency through n8n automation.

Work Experiences

PT Solusi Daya Indonesia - **Jakarta, Indonesia** Sep 2025 - Present

IT Infrastructure Engineer

IT Infrastructure Engineer (Assigned to PT Nusantara Energi Indonesia)

- Infrastructure Management: Maintain 5+ virtual machines using Proxmox, optimizing resource allocation to ensure 99.9% system reliability.
- Monitoring & Alerting: Deploy and manage Zabbix for 15+ critical infrastructure assets, enabling early issue detection and proactive maintenance.
- Containerization: Implement Docker environments for internal application deployments, streamlining the development-to-production pipeline.
- Network Security: Support and configure network layers including Cisco, Fortinet, and Mikrotik to maintain secure and stable operations.
- Process Automation: Spearhead the exploration of n8n automation workflows to reduce manual tasks and improve overall operational efficiency.
- Documentation: Maintain comprehensive system architecture and network topology records to ensure knowledge transfer and compliance.

PT Solusi Daya Indonesia - **Jakarta, Indonesia** May 2025 - Sep 2025

IT Hardware Internship

- System Deployment: Configured hardware and network devices for internal users to meet operational requirements.
- Troubleshooting: Resolved LAN/WiFi connectivity and hardware issues to minimize employee downtime.
- Asset Management: Managed hardware inventory tracking using internal systems to ensure 100% asset visibility

Badan Meteorologi, Klimatologi dan Geofisika (BMKG) - **Jakarta, Indonesia** Mar 2023 - Aug 2023

Data Scientist Internship

- Predictive Modeling: Developed a Deep Learning model using Python to predict tidal flood risks in Jakarta.
- Data Analysis: Processed and analyzed large datasets (1000+ records) using Jupyter Notebooks to identify environmental patterns.

Education Level

Universitas Negeri Jakarta - **Jakarta, Indonesia** Sep 2020 - Jul 2024

Bachelor of Fisika, 3.49/4.00

- Thesis Project: Applied Independent Component Analysis (ICA) and Machine Learning to reduce audio noise and categorize sound data.

PPKD Jakarta Pusat - **Jakarta, Indonesia** Feb 2025 - Apr 2025

Certificate in Junior Web Programmer

- Developed full-stack local web applications including a Learning Management System (LMS) and Point of Sale (POS) using Laravel and ReactJS

Organisational Experience

Kelompok Peneliti Muda (KPM UNJ) - **Jakarta, Indonesia** Jan 2023 - Dec 2023

Chairman

- Led 213 members, achieving 93% of annual performance targets and managing a research grant budget.

SMP Labschool Jakarta - **Jakarta, Indonesia** May 2024 - Sep 2025

Robotics Instructor

- Taught robotics to students with a 100% success rate in annual project demonstrations.

Skills, Achievements & Other Experience

- **Technical Skills** (2026): Infrastructure: Proxmox (Virtualization), Docker (Containerization), Zabbix (Monitoring).

- **Technical Skills** (2026): Networking: Cisco, Fortinet, Mikrotik, Linux Server Administration.
- **Technical Skills** (2025): Automation & Tools: Basic n8n, API Integration (Postman), Bash/Python scripting.
- **Technical Skills** (2025): Development & Data: Basic PHP (Laravel), JavaScript (ReactJS), Python, SQL, Machine Learning.
- **Personal Infrastructure & Home Lab Project** (2026): Successfully designed and maintained a self-hosted home server environment running on Linux Mint, utilizing Docker and Portainer for efficient container orchestration and management. The infrastructure features a diverse stack of services, including Vaultwarden for secure credential management, Pi-hole for local DNS filtering, and Kavita as a centralized digital library. To ensure streamlined navigation and real-time monitoring, implemented Homepage to track application pings and statuses. Furthermore, configured Nginx to manage local traffic and prepare for public domain integration, while deploying Tailscale to conduct secure remote access testing and private networking simulations for end-user scenarios.
- **Soft Skills**: Memiliki keterampilan kepemimpinan, komunikasi, kerjasama tim, pemecahan masalah, pengaturan strategi, negosiasi, marketing, public speaking, dan mengajar
- **Web Programming Projects** (2025): Developed a series of full-stack web applications, including a Learning Management System (LMS), a Point of Sale (POS) system, and a Professional Portfolio. Built using PHP Native, Laravel, and ReactJS, the projects involved designing responsive front-end interfaces and robust back-end logic. Additionally, implemented RESTful API integrations using Postman to ensure seamless data communication and high system interoperability.
- **Undergraduate Thesis Project** (2024): Conducted a specialized research project focused on advanced signal processing and Machine Learning. Applied Independent Component Analysis (ICA) filters to effectively reduce acoustic noise in specific audio datasets, followed by the development of a classification model to categorize the processed data. The project utilized Python for complex data analysis and algorithm implementation, demonstrating proficiency in solving technical problems through computational physics.
- **Tidal Flood Predictive Modeling – BMKG** (2023): During an internship at the Indonesian Agency for Meteorology, Climatology, and Geophysics (BMKG), engineered a Deep Learning model to forecast tidal flood risks in Jakarta. Managed and analyzed extensive environmental datasets containing over 1,000 records using Python and Jupyter Notebooks. The project involved identifying critical flood indicators and visualizing trends to support data-driven environmental disaster mitigation.
